Data Collection

The menu-driven interface of TANK enables the quick definition of input and functions for the accurate analysis of oil storage tanks to American Petroleum Institute (API) standards. Increased flexibility is provided by allowing you to select any unit combination for analyses or to produce reports. In addition, unit files are completely user-definable, so engineers are not bound by program default settings. Even existing jobs can be converted to any existing unit format.

User Interface

The user interface in TANK presents only what is needed at each point of information gathering. Therefore, you are not burdened with “out-of-sequence” requirements for information required for analysis. You are asked only for what is needed, when it is needed.

Analysis Options and Codes

TANK performs calculations in accordance with the latest API Standards 579, 620, 650, and 653. Analysis can also take into account wind, seismic, and settlement conditions, plus calculate air venting requirements to API 2000 Section 4.3.

Output and Reports

After completing an analysis, you can view the results in a tabular report or as a graphic diagram with associated data. For convenience in verifying the results, the output reports reference code sections used where applicable.
Materials and Codes

TANK includes many databases integral to the package, which makes it easy to select standard data for accurate analysis. A number of U.S. and international structural steel databases are provided. API materials are available.

Interfaces

TANK’s context-sensitive help provides instant technical assistance at the point of input. Pertinent information is presented relative to each selected item, including code references and technical advice. Built-in search makes for rapid navigation.

Equations and Substitutions

The software provides equations and substitutions, making it easier for you to verify the accuracy of your calculations.

Technical Specifications

- AutoCAD®-compatible
- Microsoft® Windows®-compatible

Application Areas

- Chemical
- Equipment
- Petrochemical
- Piping
- Power
- Process and Plant Design
- Water Treatment

ABOUT HEXAGON

Hexagon is a global leader in digital solutions that create Autonomous Connected Ecosystems (ACE). Our industry-specific solutions create smart digital realities that improve productivity and quality across manufacturing, infrastructure, safety and mobility applications.

Hexagon’s PPM division empowers its clients to transform unstructured information into a smart digital asset to visualize, build and manage structures and facilities of all complexities, ensuring safe and efficient operation throughout the entire lifecycle.

Hexagon (Nasdaq Stockholm: HEXA B) has approximately 19,000 employees in 50 countries and net sales of approximately 3.5bn EUR. Learn more at hexagon.com and follow us @HexagonAB.
